

NONATEC SOFTWARE

IDENTIFICATION AND TRACEABILITY SOLUTIONS FOR LABORATORIES

The **NONATEC** SOFTWARE, combined with the NONATEC transponder and the reader/writer, creates a complete animal laboratory management system at a very low set up cost. This system is suitable for both large and small animal facilities. Lutronic International's Nonatec engineers have designed a product with excellent reliability, data security and a user-friendly interface which allows efficient **management of laboratory data**.

Total flexibility and ease of use have been incorporated into the **NONATEC** SOFTWARE allowing the operator to:

→ Read and import the unique and universal identification number which is programmed into the tag.

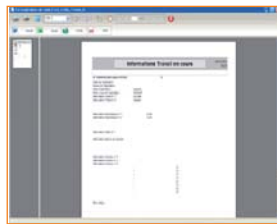

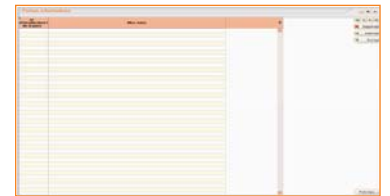

→ Write, modify, delete or add data stored by the tag.

→ Modify both the headings and units of measure within the pre defined fields of the database.

→ Work on data imported from a database.

→ Write all observations or comments on a note-pad.

→ Export data to other software e.g WORD, EXCEL, PDF, or HTML enabling reports to be produced containing both personal observations from the note-pad and data stored in the tag.

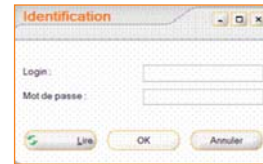

→ The Universal Reading is available to send the unique identification number to any other existing database.

→ And print out bar codes, corresponding to the unique and universal identification number of the transponder which allows identification and tracking throughout the life of the animal.

2. **NONATEC** SOFTWARE guarantees *security* and *reliability*:

→ Access to the data can be restricted by user identification

→ there can also be different levels of access allocated to each user

→ it is also possible to hide data thereby guaranteeing security of results

→ the History option is a read only independent database which can be saved either onto a personal computer or by the company server.

TECHNICAL FEATURES

→ Software including the license is supplied on a CD and requires Microsoft Office 2000 or XP

Two software versions available:

→ NONATEC PRO for a single PC

or → NONATEC LAN 5 for up to 5 pc's

or → NONATEC LAN 15 for up to 15 pc's
